# Windows Machine Information

XIA Configuration server provides a centralised management system for the detection, documentation and reporting of a growing range of network infrastructure components including Windows NT, 2000, 2003 and 2008 Server, Windows NT, 2000 Professional, XP and Vista Workstations as well as Microsoft DNS Server and SQL Server Instances. XIA Configuration can help you better understand your technical Infrastructure and with a single click can generate professionally documentation in PDF format saving hours that would have been required to write manually.
